for precise
area reading

MIRANDA CADIUS

CaDiuS is the most advanced exposure meter made. Its amazingly sensitive cadmium-sulfide photocell provides accurate readings under all light conditions, from less than one candle power to the brightest sunlight.

An exclusive viewfinder makes it easy to aim CaDiuS at the subject with pin-point accuracy.

CaDiuS is designed for convenient one-hand operation, with large, easy-to-read markings. Its ultra-precise mechanism is powered by a long-life mercury battery. This 'Pro' among meters accommodates all types of film available now and in the future.

SPECIFICATIONS

- Measures reflected and incident light with built-in sliding hemispheric diffuser.
- Shutter speeds 1/4000th second to 8 hours.
- Movie scales 8 to 128 frames per second.
